Appendix – Directory of RV Directions Files 37

Introduction

RV Directions 2011 is a collection of mapping locations that are of interest to the active RV'er. It is an add-on product that will work on any PC that is equipped with Microsoft's Streets and Trips (2006 and later) or with DeLorme's Street Atlas Plus (2006 and later). It will also work with Garmin GPS units.

The locations include campgrounds, and major highway rest areas and truck stops to help the RV'er while traveling. Hospitals and RV service companies are now included to help the RV'er deal with emergencies that they may encounter while on the road. Many difficult mountain passes and grades are identified as are many low clearance bridges. It includes restaurants (like Cracker Barrel) and shopping locations (like Walmart) to help the RV'er find a good meal and stock up on supplies while en route to their destination or at their destination. RV Directions includes public golf courses and casinos, and wineries & vineyards, to help RV'ers find recreation and touring opportunities during their travels. It also includes Eagle Lodges, Elks Lodges and Moose Lodges that provide overnight RV parking facilities to traveling Eagle, Elk or Moose members.

Many private campgrounds are rated in RV Directions 2011. The ratings can range from 0 to 100. The ratings are based upon compilation and averaging of the ratings of several campground rating sources. In other words, they provide a reasonable consensus opinion of the quality of a campground.

Most campgrounds, private and public, will have an indication of the typical cost for a night's stay, with full hookups if available, for a two people in a motor home. The cost categories are under $20, $20 to $30, $30 to $40, and over $40.

Internet access has become increasingly important to today's RV'er. Probably the most popular form of internet access is WiFi, where the RV'er can establish an internet connection from within his or her own RV. Consequently, RV Directions has included WiFi information for private campgrounds.

RV Directions 2011, when used with one of the map programs, will show the location of a point of interest by a colored icon. Information about each campground, such as cost, ratings, site characteristics, etc. is readily available by selecting the icon (in Streets and Trips) or by selecting Info (Street Atlas). In addition, the icon itself may provide information about the campground such as WiFi availability or RV parking availability. The same information is available for a Garmin GPS unit.

Other location categories will also contain information that is relevant to the location:

Truck stop location information includes availability of propane and dump facilities, as well as identification of restaurants and food services associated with the truck stop.

Rest stop location information includes availability of food and gas and RV dump facilities.

Camping World information includes availability of dump and propane facilities and defines if overnight parking is allowed.

Walmart, Cabela's and Bass Pro Shop location information describes if overnight parking is allowed.

Cracker Barrel and Bob Evans restaurants will describe if parking for RV's is available.

Hospital information includes hospital size (number of beds).

The four RV service organizations each indicate the type of facility.

And more. Please read the following pages for additional information.

What's New In the 2011 Release?

There are many new features and improvements in the RV Directions 2011 release. These are summarized below:

NEW FEATURES:

1. Expanded Coverage Of Canadian Locations
2. New Campground Affiliations
    a. Best Parks In America
    b. North American Camping Club
3. More Campgrounds
    a. 12,336 Private Campgrounds
    b. 10,650 Public Campgrounds
4. More Truck Stops
    a. 2,428 Truck Stops
5. New Recreation Locations
    a. Gun Clubs
    b. NASCAR Race Tracks
    c. Skiing Locations
6. New Shopping Locations
    a. Home Depot
    b. K-Mart
7. Medical Care for Pets
    a. Hospitals
    b. Veterinarians
8. Low Clearance Bridges
    a. Up to 15'0"
9. Eagle Lodges that provide RV parking

IMPROVEMENTS

1. Updates and additions to existing data
2. Updated latitude/longitude data
3. Campground information now includes
    a. Handicap Access
    b. Cable TV
    c. Fishing and Boating
    d. Pool
    e. Church Services
    f. Campground Elevation
    g. Site Escort
    h. Pull Through Site Sizes (Width x Length)
    i. Back In Site Sizes (Width x Length)

Product Overview

The location information in RV Directions 2011 includes data that will work with Microsoft Streets & Trips (stt template files) and data that will work with DeLorme Street Atlas (dds XData dataset files). It includes CSV (Comma Separated Variable) data that has been specially formatted for use on Garmin GPS Units. In addition, CSV data is provided for all locations to allow the user to create their own groupings of RV locations information.

The product organizes information within several groups. These groups are replicated for Garmin, Street Atlas and Streets & Trips:

Campground Affiliations
Campgrounds – Military
Campgrounds – Private
Campgrounds – Public
Dealing with Emergencies
Fraternal Lodges
On The Road Locations
Post Offices
Recreation Locations
Restaurants
Shopping

In addition, 120 spectacular road trips from the Readers Digest book "The Most Scenic Drives in America" are included. Any of these trips can be integrated into your route planning.

Interpretation of Information

The information contained in RV Directions must be properly interpreted if you want to get maximum benefit from the information. These pages will, hopefully, clarify the assumptions and conditions that went into development of the data within the product.

General

Dependency On Information Source - Virtually all of the information contained in RV Directions came from the internet, usually the web site for a specific location. We have accepted this information as valid. Thus if a campground states that they can accommodate a big rig, we will identify that campground as being big rig accessible. Similarly, if a campground states that they offer WiFi, we will accept this and identify that campground as having WiFi coverage.

Accuracy Of Information - We have tried to make RV Directions as accurate as possible but undoubtedly there are mistakes. Campground name changes, confusion over a mailing address and a physical address, and just plain human error will all contribute to these mistakes. Please let us know if you find a problem, and we'll try to fix it.

Affiliated Campgrounds - Campgrounds join and then leave campground affiliations with regularity. Be aware that a campground listed as being affiliated with a certain organization may no longer be affiliated. Also, be aware that several of the affiliations are membership organizations. You must be a member of the organization in order to use the facilities, or take advantage of the discounts offered by that organization.

Campgrounds

Campground Cost - We have tried to error on side of stating the higher cost in a range, so that you will be pleasantly surprised should a $30 to $40 campground give you a price of $27, for example. We have tried to select cost figures that would be applied to a couple driving a large motor home, and using 50 amp electrical service, if available. If a campground offers premium sites and standard sites, we usually would select prices for the premium sites. Again, call ahead if campground price is very important to you.

Campground Overview And Features - Private campgrounds map detail includes several other parameters that should be clarified:

Extended Stay Sites - If present, indicates that there are some, or many of the sites at the campground are occupied by long term guests.

CG Features - If a specific feature is not listed, it doesn't necessarily mean that the campground doesn't have that feature. It might just mean that we didn't have access to current or accurate information. Call the campground if the feature is really important to you.

Age – Will almost always mean that guests must be 55 years old, or older.

Pets OK – Will mean that the campground will accept pets. However they may have some restrictions – like breed or how many pets that you are allowed.

Groceries/Store – May mean that the campground has limited groceries, or may mean that a fully stocked store is available, including groceries, souvenirs, and other merchandise.

WiFi

More and more campgrounds are adding WiFi every day. It is virtually impossible to keep up with the growth of this service. It is fairly safe to assume that campgrounds that are identified in RV Directions as supporting WiFi will offer this service. It is not safe to assume that campgrounds in RV Direction that don't identify WiFi coverage, don't offer such coverage. They may have added the service since this version of RV Directions was released. Call ahead if WiFi coverage is important to you. Also, it should be noted that some campgrounds charge for WiFi service, others offer it as a free service. RV Directions does not indicate whether a campground charges for WiFi services. Finally, it should be noted that WiFi coverage indicated in RV Directions 2011 may be of the "hot spot" variety. That is, you may have to go to a specific location on the campground with your laptop computer (like the office area).

Low Clearance Bridges

The information in RV Directions is not provided as a safety aid and does not replace the need for normal driver awareness of road hazards and conditions. No guarantee of accuracy or completeness is given. RV Directions, LLC makes no representations about the suitability or merchantability of the information contained within RV Directions. The data contained within RV Directions is provided "as is" without warranty of any kind. Finally, the information within RV Directions product is to be used for guidance only. In no event shall RV Directions, LLC and/or its respective suppliers and developers be liable for any special, indirect, consequential damages, accidents or loss of life from using the product.

The Most Scenic Drives in America

The drives included in RV Directions 2011 were defined in the Readers Digest book entitled "The Most Scenic Drives in America". Some of these drives involve roads that are definitely not suitable for an RV. The roads may be rough, steep narrow roads, involving difficult grades and many hairpin curves and switchbacks, In these cases we recommend that your trip be accomplished in your car – leaving your RV at your base campground. We would also recommend that you obtain the book which describes in detail the driving situations on each of the trips.

Product Installation

Running the setup program will cause RV Directions to be automatically installed in a single directory on your hard drive. The default directory is "RVDirections2011", but you can change this if you wish, to any directory name of your choosing. After the installation is complete, the directory will contain the following folders and files:

RVDirections2011

1. RV Directions 2011 User's Manual
2. Folder—Garmin Files
3. Folder—2011 Street Atlas Files
4. Folder—2011 Streets & Trips Files
5. Folder - The Most Scenic Drives in America
6. Folder—Tools

The Appendix lists the contents of these folders.

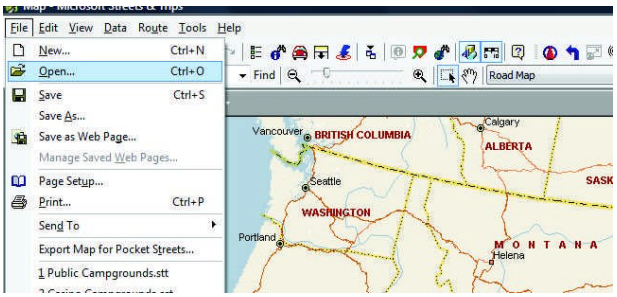
The following pages show you how to install and use RV Directions 2011. The graphics used in the illustrations were made using earlier versions of RV Directions. Also, references to location groups have been changed in 2011. They are as follows:

- Campground Affiliations
- Campgrounds
- Dealing With Emergencies
- Fraternal Lodges
- On The Road Locations
- Post Offices
- Recreation Locations
- Restaurants
- Shopping

Using The Product With Streets & Trips 1

To use a Streets & Trips file, do the following.

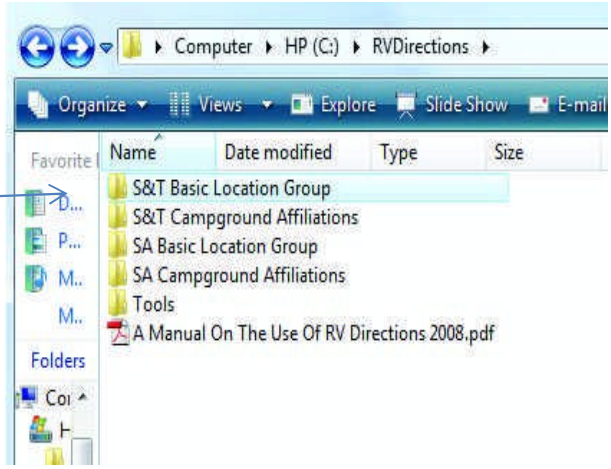
Select FILE / OPEN



Look in RVDirections2011 (or the directory name you selected during installation), in the location group containing the template file you want.

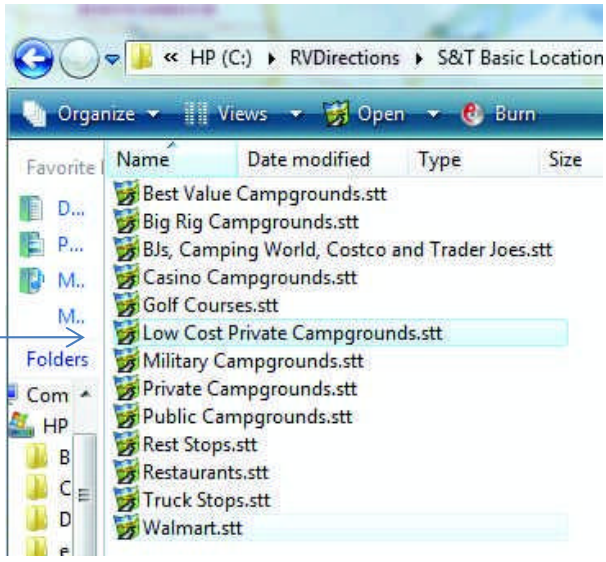
Let's say you want to load the template file for *Low Cost Private Campgrounds* in the B*asic Location Group*.

Select *S&T Basic Location Group*



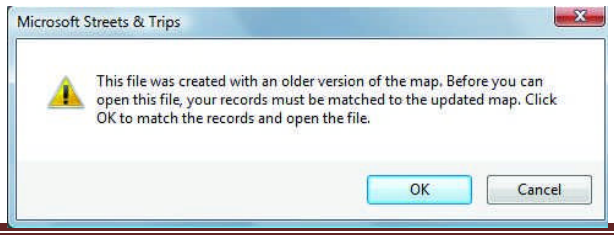
Computer ▸ HP (C:) ▸ RVDirections ▸
Organize Views Explore Slide Show E-mail
Favorite
Name Date modified Type Size
S&T Basic Location Group
S&T Campground Affiliations
SA Basic Location Group
SA Campground Affiliations
Tools
A Manual On The Use Of RV Directions 2008.pdf
Folders

Then select *Low Cost Private Campgrounds*



6. If you are running Streets & Trips 2007 or later, you will see this message.

   Click OK.
   (You will only have to do this the first time.)



Microsoft Streets & Trips
This file was created with an older version of the map. Before you can open this file, your records must be matched to the updated map. Click OK to match the records and open the file.
OK
Cancel

Using The Product With Streets & Trips 2

You will then see this map showing all of the private campgrounds costing less Than $20 per night.

You can now zoom in on the area that you are interested in.

Click on the icon that you are interested in. A window will appear with details for that particular campground. You can scroll the window to see any hidden detail by placing the cursor in the window and using the down arrow key on your keyboard.

Using The Product With Streets & Trips 3

The last item in the scrolled window will be an internet address (it will look like this http://maps.google.com/maps?f=q&hl=en&geocode=&q=37.89541,-93.80363&z=15), If you are on the internet, you can click on this address and get a Google earth picture of the location. Sometimes the quality is excellent. Other times it is very poor—especially in rural and remote areas. It's an interesting tool and one that may help you see where you are going.

Below you can see an example. The location is the Fiesta Key Campground in the Florida Keys. By the way, you can use this tool on virtually all of the location types in RV Directions 2011 (rest areas, golf courses, truck stops, restaurants, etc.).

Just above the Google map address in the scrolled window, may be another internet address. Clicking on this address will take you to the web site of the campground (or location) that you are looking at.

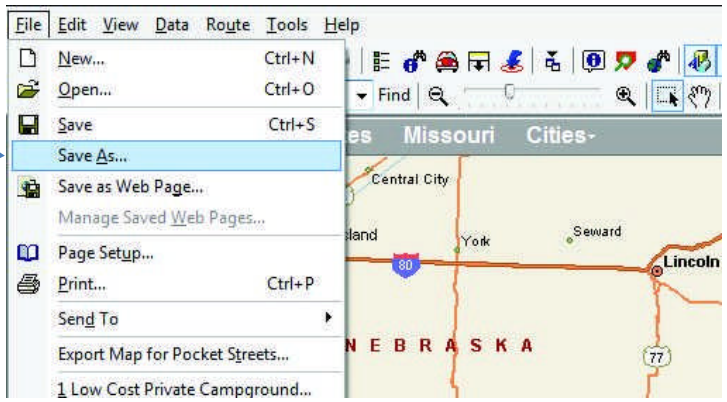
Users of Microsoft Streets & Trips 2010 or 2011 can also get a satellite picture of a selected location by right clicking on the location, selecting "*Zoom To*", and then selecting "*Show in Bing Maps*".

Keep in mind that you must be connected to the internet to accomplish any of the things described on this page.

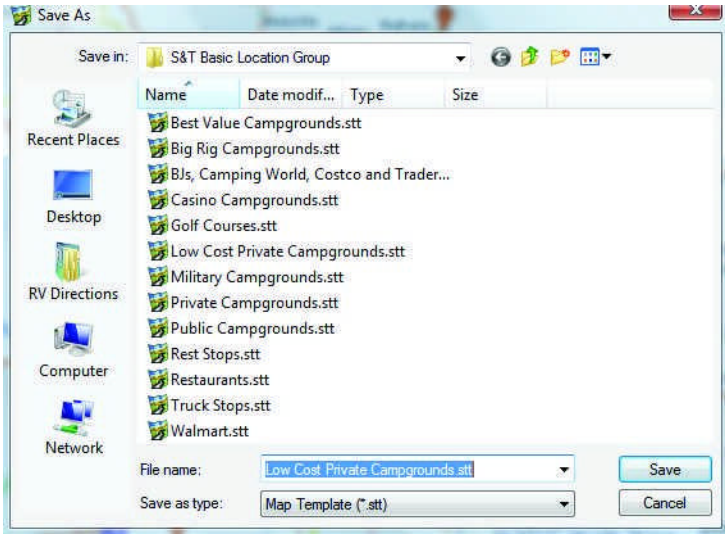
Using The Product With Streets & Trips 4

At this point you can save the file in the Proper format of the version of Streets & Trips that you are using.

First, select FILE / Save As …

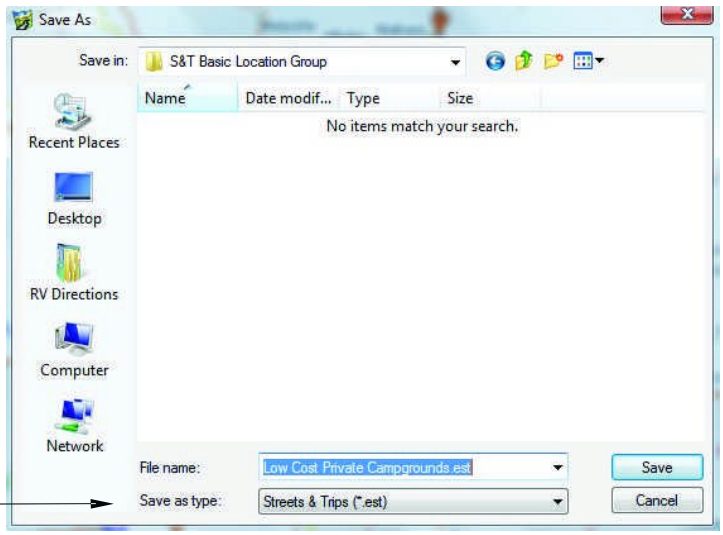


A "Save As" window will appear. It will Default to saving the file in the same directory that it was loaded from. This is the directory that was created during installation.
That will work, but we would suggest an alternative—to save the file in the Template Folder that Streets & Trips uses when you wish to create a new map file. That way, you can load the file directly every time that you want use it by selecting FILE / NEW and selecting it from the list of template files in this directory.



An easy way to save to the Template Folder is as follows:

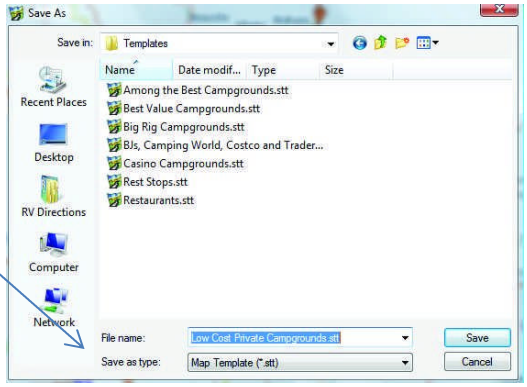
1. Change the "Save as Type" to (*.est). The window should look like this as there probably aren't any *.est files in the installation directory.



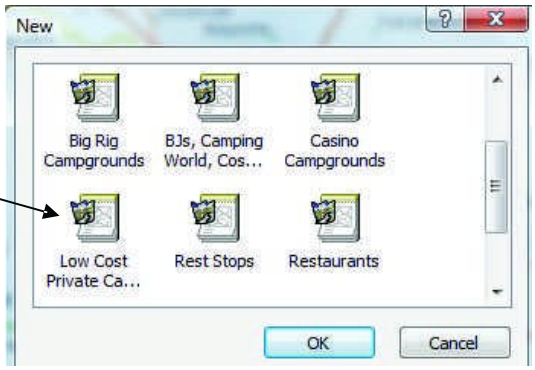
Using The Product With Streets & Trips 5

2. Now, change the "Save as Type" back to (*.stt).

You will now be pointing to the Templates folder.
Go ahead and "Save".



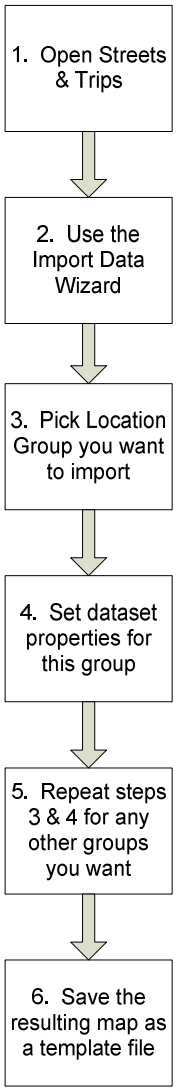
3. The template file will be saved to the Templates folder and will be accessible every time that you open a NEW file in Streets & Trips.



Creating Your Own Group Of Locations 1

Streets & Trips 2010 and Streets & Trips 2011 allow you to selectively add and subtract location groups. Versions before this do not. This can be inconvenient if you normally want to see two or more groups on your map display. For example, when I travel, I want to stay at campgrounds that have WiFi. I also want to see where the next rest area is. And, I also want to see where the next truck stop is. So the display I look for would include truck stops, rest areas and campgrounds with WiFi. You would have your own list of location groups to display. If you were a member of Passport America, for example, you probably would want your standard display to include Passport America campgrounds. Some people like to stop at a Cracker Barrel for lunch, so their standard display would probably include Cracker Barrel locations.

You can build your own customized set of location groups in RV Directions. The remainder of this page and the next page will describe how to do this. The process may look complicated but it's really not. Give it a try.



1. Open Streets & Trips
2. Use the Import Data Wizard
3. Pick Location Group you want to import
4. Set dataset properties for this group
5. Repeat steps 3 & 4 for any other groups you want
6. Save the resulting map as a template file

Open Microsoft Streets & Trips. Do not load any existing map files.

Streets & Trips has an "Import Data Wizard" to help a user import data files. The wizard can be selected by engaging the "CTRL" and the "I" keys on your keyboard at the same time. When the wizard window appears, make sure that Files of Type at the bottom of the window specifies "Text Files".

Now, you're ready to select the first Location Group that you want to include in your custom set. These groups are contained in the "Mapping Program CSV Files" folder which is in the "Tools" folder under RVDirections2011. For example, *Good Sam*.

Having selected a group, click on "Open". A window stating "Choose a Seperator Character" will appear. Make sure that Comma is selected. Then click on "Next".

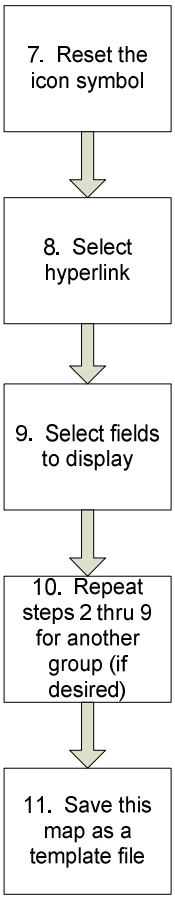
The next window will contain column heading and data type information about the selected group. You don't have to do anything about this information. However, make sure that "First row contains column headings" is checked. Then click on "Finish".

This will result in the map displaying all of the locations of your selected group. You now need to set the dataset properties for the group. First, select one of the location icons. A little rectangle will encompass the icon. Then click on "Data" on the toolbar at the top. Select "Dataset Properties" from the dropdown window.

At this point a window will open entitled with the name of the location group that you selected plus "Properties". You need to do three things with this window. The three actions are described on the next page.

Creating Your Own Group Of Locations 2

The process is illustrated below



7. Reset the icon symbol
8. Select hyperlink
9. Select fields to display
10. Repeat steps 2 thru 9 for another group (if desired)
11. Save this map as a template file

First, reset the icon symbol. Do this by clicking on the "down arrow" on the symbol box. A window will open contain lots of symbols that are built into Streets & Trips and a button entitled *Import Custom Symbol*. Click on this button. An "Open" window will appear. Move the "Look in:" window so that it points to the "*Tools*" folder within the *RVDirections2011* folder. Then select *2011 Icons for Streets & Trips.* You will see eleven folders, each containing many different icons. Browse through these folders and select the icon that you want to use for the location group that you are working with. Then click on "Open". The icon that you selected will be displayed above all of the standard symbols. Click on this icon.

Next, click on the "Hyperlink" tab. Select "Use hyperlinks from your imported data". Click on the down arrow control. This will open a drop down list containing all of the fields of information that are in your selected location group. If you see "Web" at the bottom of the list, select it. Otherwise keep the selection at <None>.

Finally, click on the "Balloon" tab. A drop down list will show all of the fields that can be displayed when you select Information about a specific location. Select all of the options except for Long and Lat.

You have now completed the addition of a specific location group. You can do this as many times as you like to bring in other groups that you want.

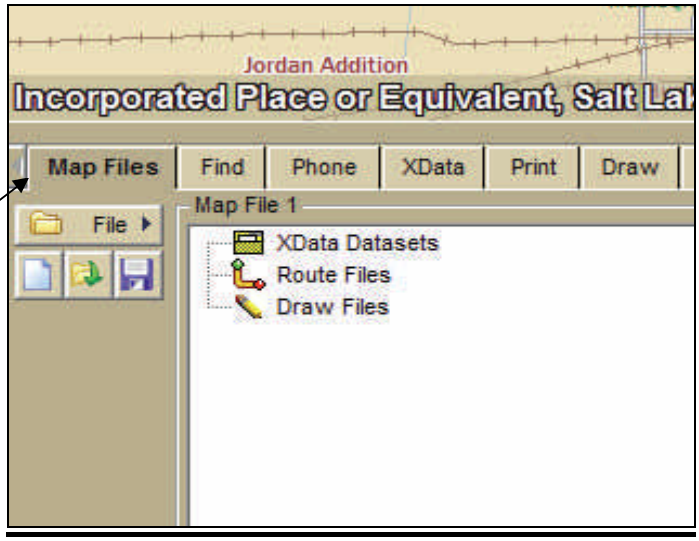
Now you want to save this map file as a template file with a recognizable name. Click on File, then Save As. A Save As window will open. The bottom entry is Save as type: You want to select Map Template (*.stt). When you do, the window will be replaced with one pointing to Templates. Pick a meaningful File Name and then click on Save.

You're through. I suspect that the above instructions seem intimidating to many of you, but they're really not. Go through the process one time and you'll discover how easy it is. You'll then be able to make several customized groups of locations that meet your very specific needs—like a general group, another focused on the requirements for an upcoming trip. And, of course, if you own the 2010 or 2011 versions of Microsoft Streets & Trips you won't have to go through this process. Simply load all of the location groups that you are interested in and hide the ones you aren't interested in at the moment.

Using The Product With Street Atlas 1

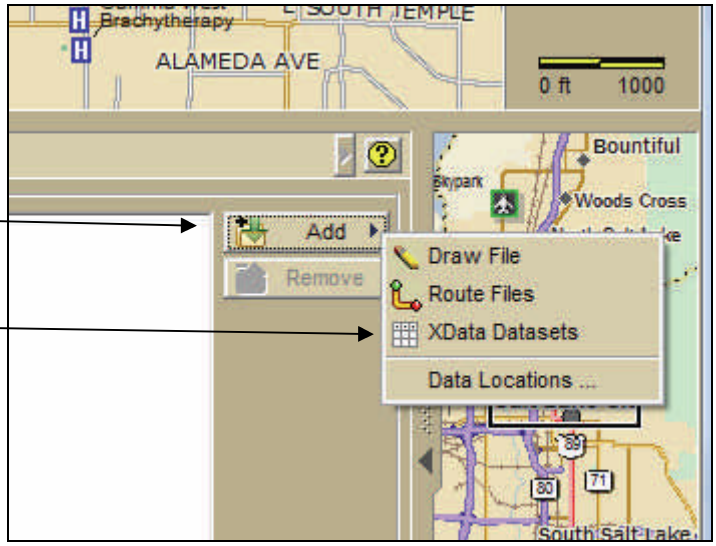
To use a Street Atlas file, do the following:
NOTE: All illustrations were taken from a computer running Street Atlas 2010 under Vista. Your computer may look a little different if you're using a different version of Street Atlas and/or running a different version of Windows.

Open DeLorme Street Atlas and select the tab Map File



Then select Add

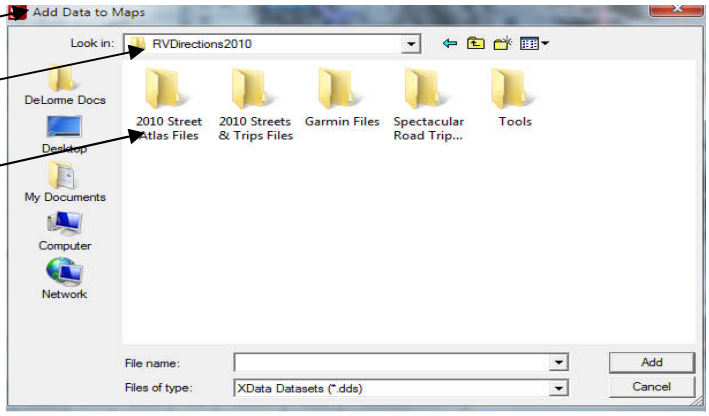
And XData Datasets



An Add Data to Maps window will appear

Move to the RVDirections2011 folder

And select 2011 Street Atlas Files



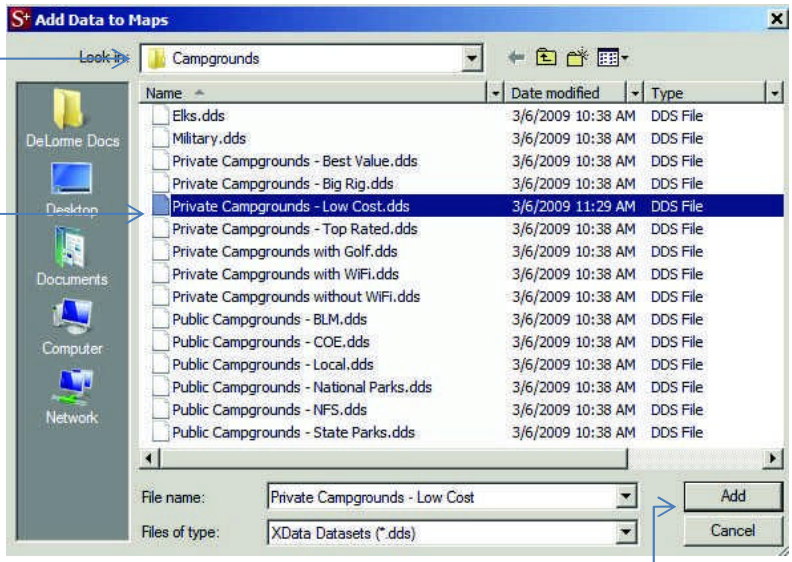
NOTE: The graphics show references to 2010. You will see these references as 2011.

Using The Product With Street Atlas 2

Then select a Street Atlas folder. In this example we have selected the Campgrounds Folder

The dds files in this folder will show up.

We'll use *Private Campgrounds—Low Cost*



Add Data to Maps

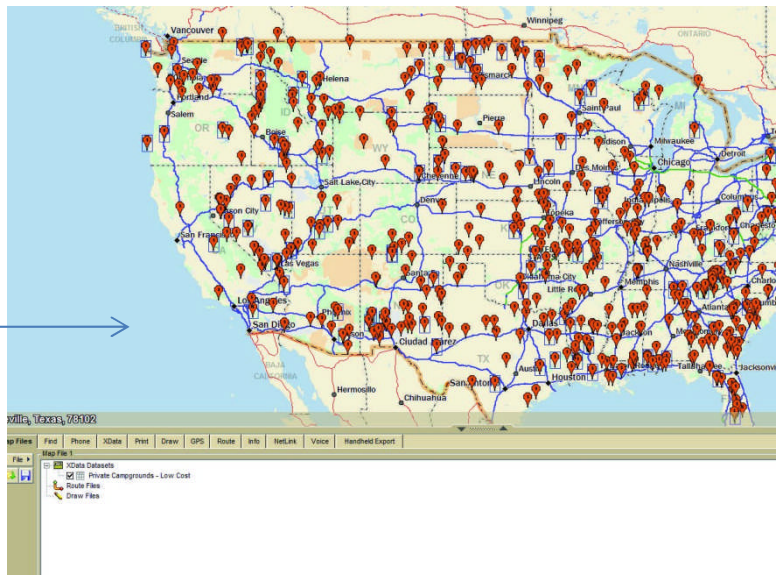
Add
Cancel

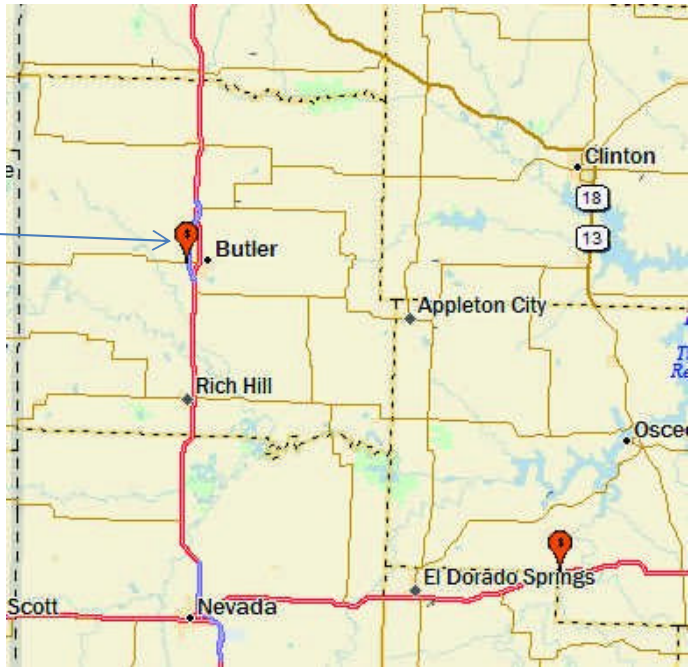
After selecting this file, click on *Add*

And, the selected Low Cost Campgrounds will appear on the map.

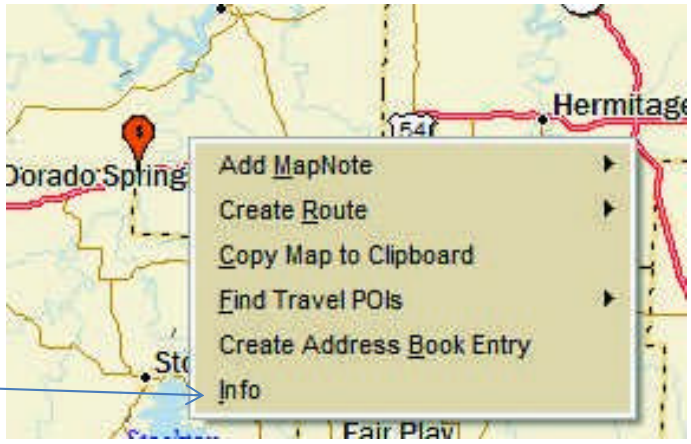


Using The Product With Street Atlas 3

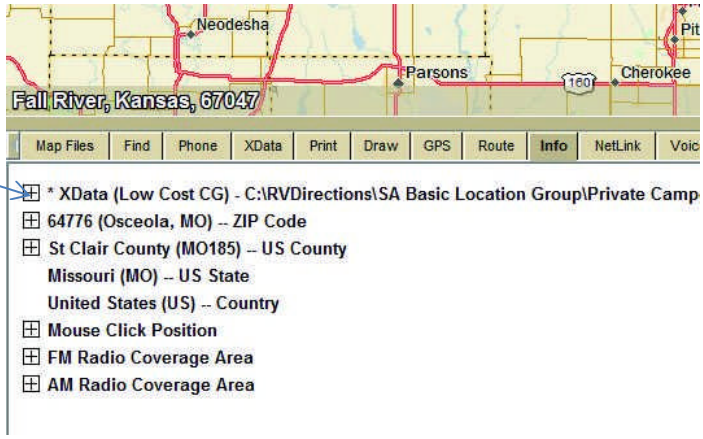
Place the cursor over the campground location that you're interested in and right click



A small window will appear as shown here. Click on *Info*.



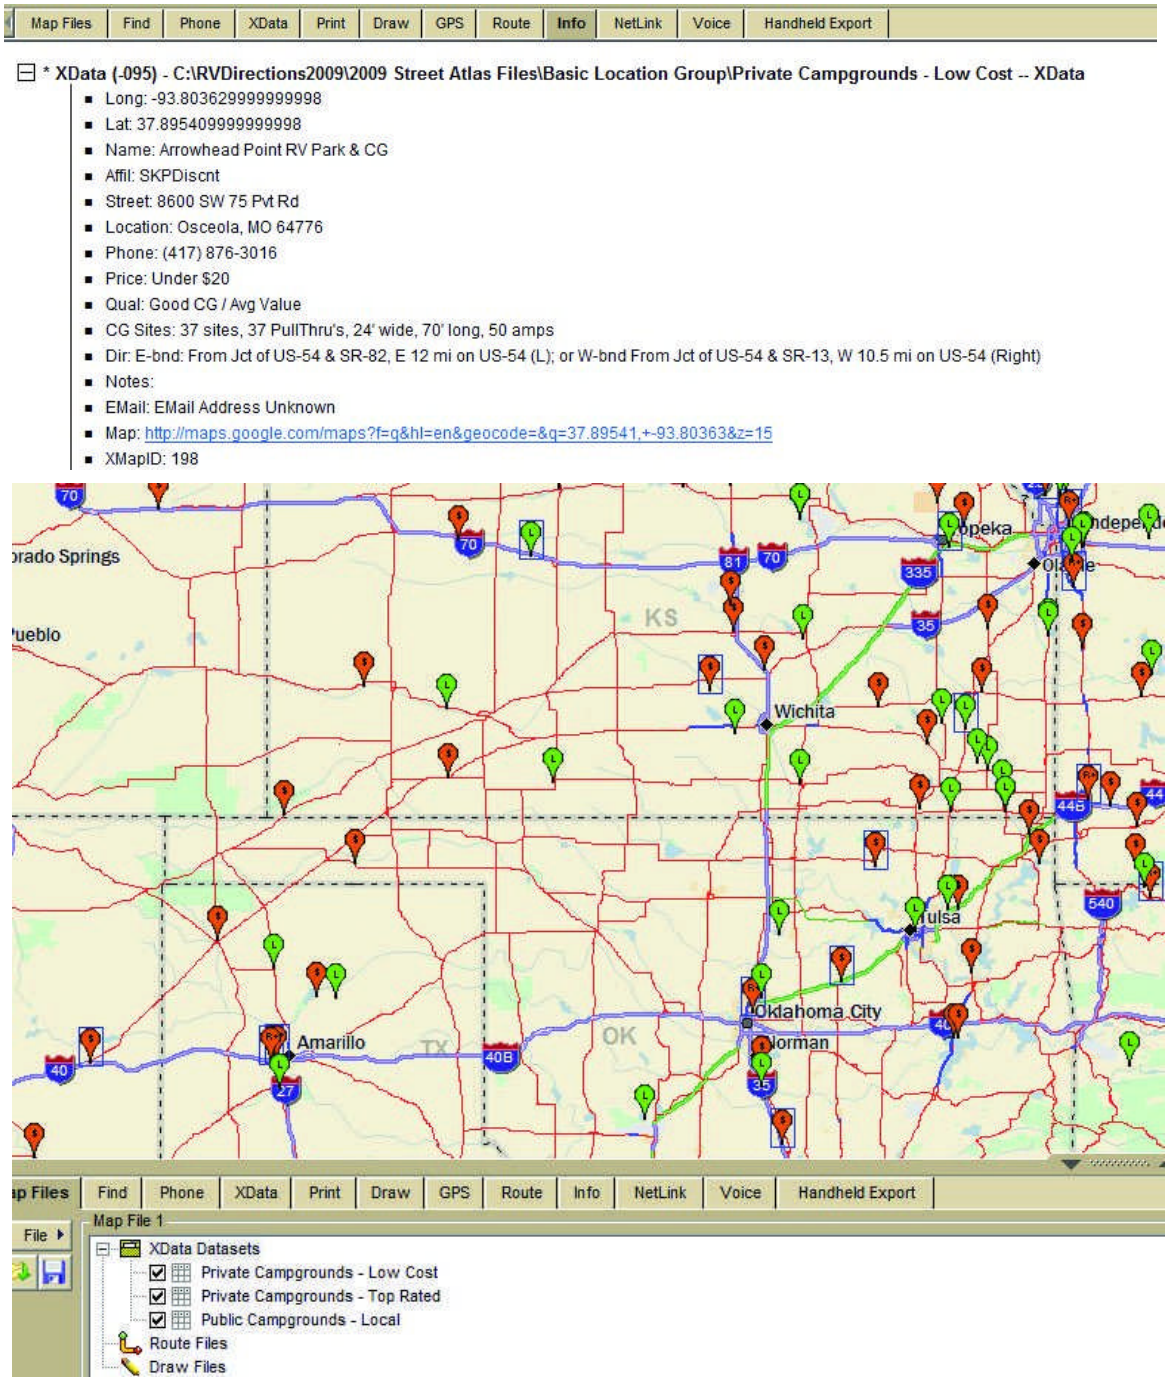
A display like this will appear at the bottom of Your display. You are interested in the XData line. If there is a + at the start of the line, click on it.



Using The Product With Street Atlas 4

Clicking on the + will result in the display of the detail for the selected campground as shown below. Notice the Map internet address. If you are on the internet you can click on this line and get a satellite display of the location as described earlier.

You can add any number of additional datasets to the map. We have added Top Rated Private Campgrounds and Local Public Campgrounds as shown below. It is recommended that no more than 20 to 30 datasets be used. You can selectively view any combination of the datasets by checking or unchecking the boxes



Using The Product With Street Atlas 5

You can access the Google map interface discussed for Microsoft Streets & Trips on Page 14 in basically the same manner. In this case the internet address can be seen as the last entry in the XData information window as shown below. Notice that this location, unlike the one on the example on the previous page, also has a campground web site address which you can use, if you're on the internet, to access their web site.

Campground internet address

Installing RV Directions To Your Garmin Device 1

The first step is to upload the CSV files contained within RV Directions to your Garmin GPS unit. This can be done with a software package call POI Loader. POI Loader is free software from Garmin that lets you upload customized points of interest (POIs) such as those provided with RV Directions to your compatible Garmin device. You can obtain this software by downloading it from the Garmin site. The web address shown below will bring you to the download page.

http://www8.garmin.com/products/poiloader/

POILoader
GARMIN
POI Loader
Welcome to POI Loader. This program will retrieve Points of Interest (POIs) from data files and load them into your Garmin GPS or onto an SD card where your Garmin GPS can read it.
You can also save your Points of Interest for Garmin MapSource to use or save them locally to your hard-drive.
< Back
Next >
Cancel
Help

Your Garmin unit should have come with a cable that allows you to connect the unit to a USB port on your computer. Connect the Garmin unit to your computer using this cable.

Now run the POI Loader program. The first screenshot to the right is the opening screenshot that you will see when you run the program. Click Next.

Now click Garmin Device and select Next.
You will now specify where you want to send the POI files. If your Garmin unit has adequate memory you may want to download the POI information directly to the unit. In this case you would select the Garmin name on the dropdown list (nuvi…. as shown in the example to the right). If not, you would want to download the files to an SD card that you will have inserted in the unit before starting this process. The SD card will appear on the list as one of the Removable Disk drives. In the example, the SD card is the T drive.

POILoader
GARMIN
POI Loader
Select the device where you would like to store your Points of Interest. Refer to your user's manual for more information about connecting your device to your computer.
Device Settings
If you don't see your device listed below, connect it to the computer and turn it on, then click Find Device.

Help

Installing RV Directions To Your Garmin Device 2

The next screen allows you to specify where the program can find the input files. **Now here's a work of caution.** POI Loader expects that the folder you point to has CSV files in it – not more folders. If you're pointing to the folder named "2011 Garmin Files", you will get the error message that you mentioned. If you go down one more level in "2011 Garmin Files" you will get to the CSV files. For example, the folder "Campground Affiliations" includes over 30 CSV files, with the first one being "ACN". So, if you point POI Loader to "Campground Affiliations", it will load all of the files i this folder to your Garmin unit.

That probably isn't what you want to do, so here's a recommended alternative:

1) There is a folder in "2011 Garmin Files" entitled "*_My Favorite Garmin Files*".
2) This folder initially has one file, + Private Campgrounds (All), in it.
3) Go into each of the folders in "2011 Garmin Files" and select any additional files you may want. Do this by holding the CTRL key on your keyboard while selecting the individual files that you want. When you have selected the last file that you want, RIGHT CLICK on your mouse. You should get a window that includes a COPY command. Select COPY.
4) Now go to the folder *"_My Favorite Garmin Files*". Paste the copied CSV files into this folder.
5) Repeat the above for each of the folders in "2011 Garmin Files". When you are through, "*_My Favorite Garmin Files*" will contain all of the files that you want.
6) Now, run POI Loader and point to *"_My Favorite Garmin Files*" which is now filled with the files that you want. POI Loader will then load these files into your Garmin.

This should work for you. It might sound complicated but it's really not. And you only have to do this once, unless you want to add or delete files in your new folder.

Two other alternatives for loading your Garmin are discussed on the next page.

Installing RV Directions To Your Garmin Device 3

We have placed a folder in "2011 Garmin Files" entitled *"_Don's Favorite Garmin Files"*. This folder contains a subset of the total number of locations that come with RV Directions 2011. This subset includes:

- All of the truck stops
- All of the rest stops
- All of the private campgrounds

- All of the Walmart's
- Four of the more widely used Campground affiliations
    1) CampClub USA
    2) Good Sam
    3) KOA
    4) Passport America

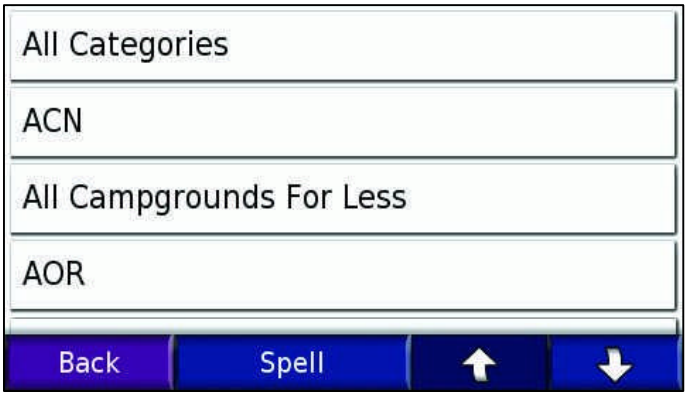
Finally, we have placed a folder in "2011 Garmin Files" entitled *"_All Garmin Files"*. You can, if you wish, point to this folder and load every CSV file that is included in RV Directions.

The final step in the installation of the files you want on your Garmin unit is to point to one of the three folders just mentioned (_My Favorite Garmin Files, _Don's Favorite Garmin Files, or _All Garmin Files) and select Next. It will take approximately one to three minutes for the files to load into the Garmin unit. Finally, a screen similar to the one shown below will be displayed. Click Finish.

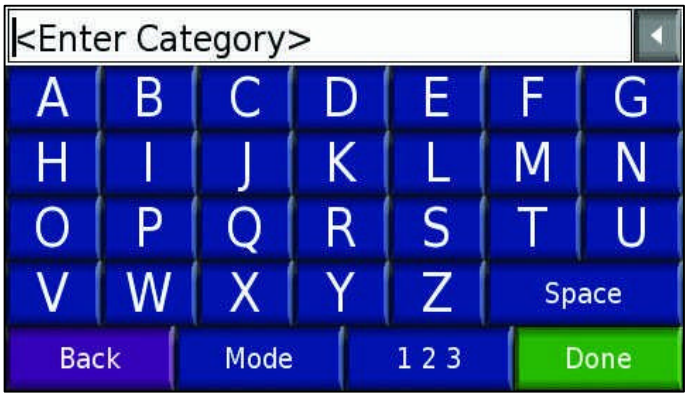
Your Garmin unit is now ready to use.

Using The Product With Your Garmin GPS Device 1

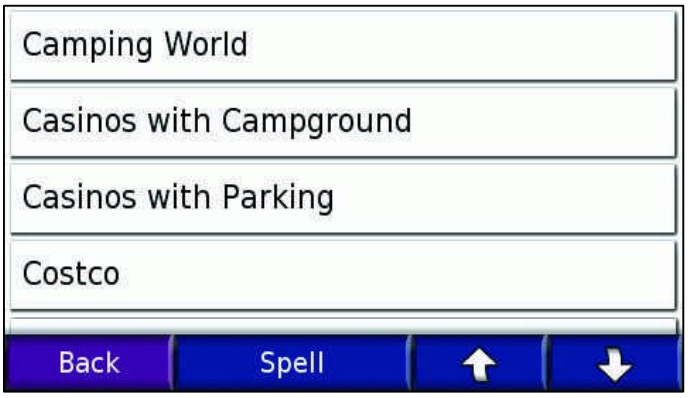
To use the RV Directions locations in your Garmin GPS Unit, select *Where To?,* then *Extras*, then *Custom POIs*. At this point, you should see the screen to the right. There will be an alphabetical list of all location groups in RV Directions.



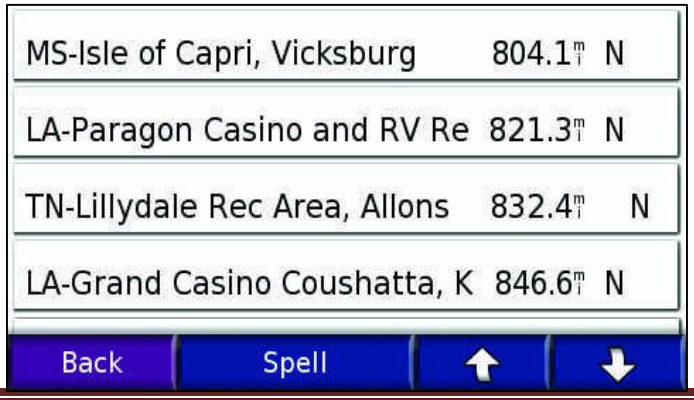
Scroll down to get to the other groups, or press the Spell button and enter the first few letters of the group name you are interest in. For example, if you wanted to find a rest stop, you would enter R and then E then S then T.



In our example, we're going to look for a casino with an RV park in Louisiana. We scrolled down to the screen seen here and pressed "*Casinos with Campground*".



We then scrolled down to get to the screen containing the casino we are interested in—*Paragon Casino and RV Resort*.

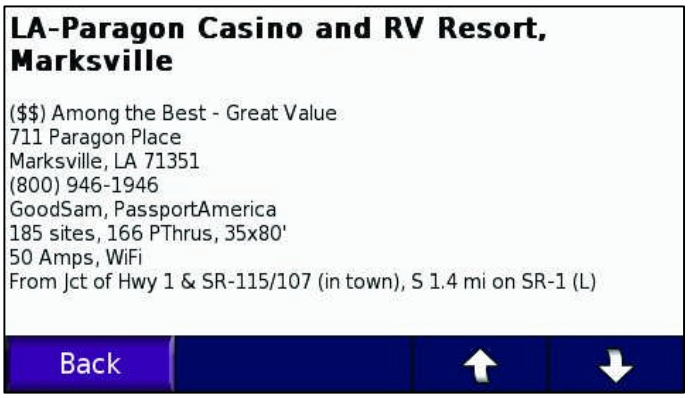


MS-Isle of Capri, Vicksburg 804.1 N
LA-Paragon Casino and RV Re 821.3 N
TN-Lillydale Rec Area, Allons 832.4 N
LA-Grand Casino Coushatta, K 846.6 N
Back
Spell

Using The Product With Your Garmin GPS Device 2

We pressed that name and got the summary screen shown here.

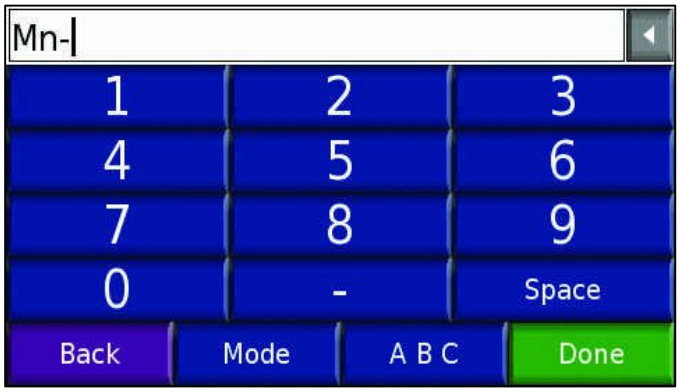
Pressing the More button gives us full detail on this location.



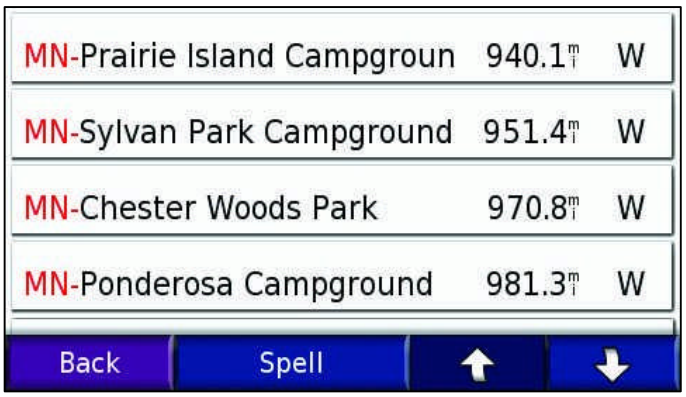
LA-Paragon Casino and RV Resort, Marksville
($$) Among the Best - Great Value
711 Paragon Place
Marksville, LA 71351
(800) 946-1946
GoodSam, PassportAmerica
185 sites, 166 PThrus, 35x80'
50 Amps, WiFi
From Jct of Hwy 1 & SR-115/107 (in town), S 1.4 mi on SR-1 (L)
Back

Using The Product With Your Garmin GPS Device 3

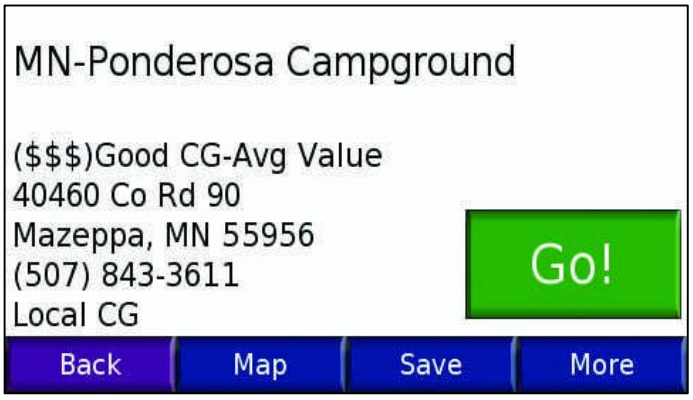
All Garmin location names in RV Directions start with the two letter state acronym and a dash. This helps us quickly get to the locations in the state that we are interested in. Let's assume we're trying to locate the Ponderosa Campground, a local campground in Minnesota. We first select Local as explained previously. We then type in *MN* and press the 123 button. This will bring up the screen seen to the right were we can enter the dash. Press *Done* when this 3 letter input is complete.



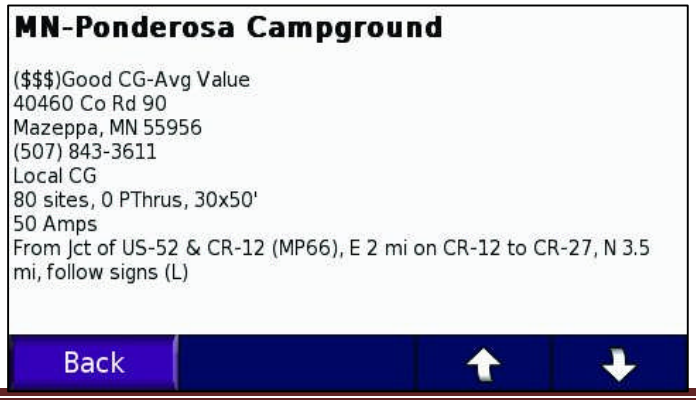
This will result in a screen with local campgrounds in Minnesota. They will be listed in the order of closeness to the location we are currently at. We scroll down to find Ponderosa. (We could have done another Spell to find it). This will result in the screen like that seen to the right. So we press the Ponderosa name..



The summary screen for the Ponderosa Campground will appear. We see that it costs $30 to $40. We can get more information on the campground by pressing *More*.



That brings up the detail screen where we can see all of the detail on the Ponderosa Campground.



MN-Ponderosa Campground
($$$)Good CG-Avg Value
40460 Co Rd 90
Mazeppa, MN 55956

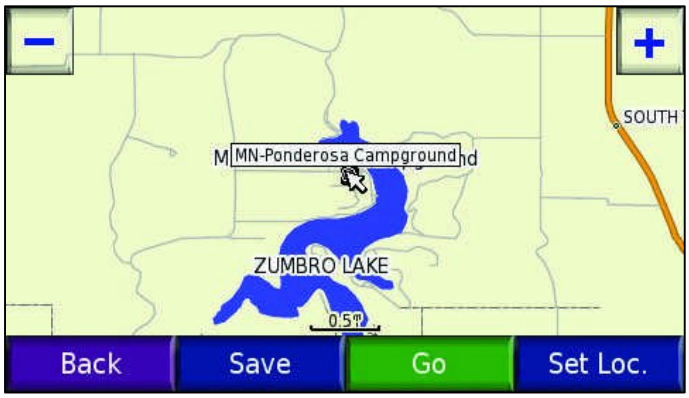
Back

We can return to the summary screen by pressing *Back*, where we can go to the locations *Map*.

Using The Product With Your Garmin GPS Device 4

At this point we can *Save* the location to our Favorites, or we can select *Go* to start on our journey.



Using The Scenic Drive Information

Often times when we are on a cross-country trip, we use the interstate highway system for most of the trip. Unfortunately, this causes us to miss out on a lot of the scenic beauty that America offers. In the past, I have used a book published by Readers Digest entitled "The Most Scenic Drives In America" to help me deal with this problem. This book contains 120 scenic drives throughout the entire country. Oftentimes my desired route is not too far from one of the routes in the book. For example, I have traveled from Houston to New Orleans many times. The standard route for this trip, shown on the top of the next page, is approximately 348 miles long, following I-10.

Why not take the Bayou Byways (Drive 79) from Lafayette to New Orleans. This adds 162 miles to the trip and takes you through coffee-colored bayous, stately sugar plantations, ancient cypress swamps, and more. The addition of this scenic drive to the Houston-New Orleans trips is shown on the bottom of the next page.

All of the 120 scenic drives defined in the Readers Digest book are included in RV Directions 2011. An index of the drives is contained on the pages following the two example trip maps.

Loading a scenic drive is dependent on the platform you are using:

Garmin: The scenic drives are loaded as "Drive nnn" To quickly get to the drives use Spell and type in "drive", then done. This will take you to the first drive, Drive 1 – Olympic Loop.

Streets & Trips: The drives are in STT format, and are loaded just like you would load any location.

Street Atlas Plus: The files are in a GPX format. They can be imported in versions 7 and later of Street Atlas. Select Route, File and then Import to load a specific scenic drive.

If you are interested in using this new RV Directions feature, we would recommend that you obtain the book "The Most Scenic Drives In America". It can be purchased at most bookstores or on the internet through Amazon and others.

Happy Travels

We hope that you get great value and enjoyment from RV Directions.

Our goal is to continually improve the product and we could use your help in this regard. If you identify any errors in the information regarding a location, please let us know so that we can fix the problem. The best way to do this is by email to the following email address:

support@rvdirections.com

Similarly, if there are subjects that are not clear, or are inaccurate in this user's manual, let us know about that.

Thanks for your business.
